Project 1

INTRODUCTION

- welcome to the presentation for Notepad. As we all know, keeping track of important information and ideas can be a challenge, especially when we're on the go. That's why I created this simple yet powerful notepad app, designed to help you stay organized and productive, no matter where you are.

- With Notepad, you can quickly and easily create and save notes. The app features a simple, intuitive interface that makes it easy to find and organize your notes, and you can even customize the app with different themes and colors to suit your personal style.

- In this presentation, I'll be taking you through some of the key features of the notepad app, including how to create notes, organize them with tags and categories.

INTERFACE

The app starts with a splash screen, followed with a button saying "Get Started "

FUNCTIONS
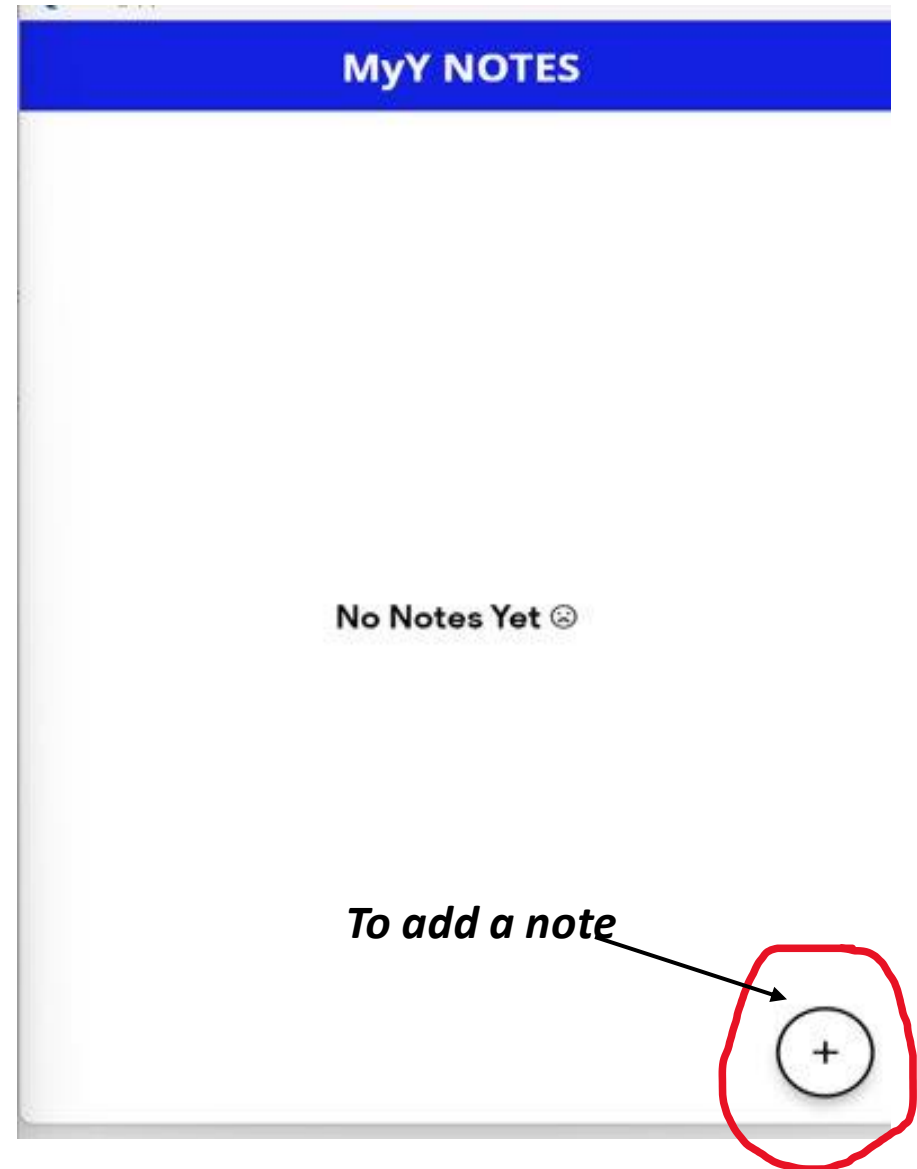

Users can create new notes by tapping on a "+" button

Users can write titles for the notes.

Users should be able to edit their notes easily. They can do this by selecting the note they want to edit and then making changes to the title or description.
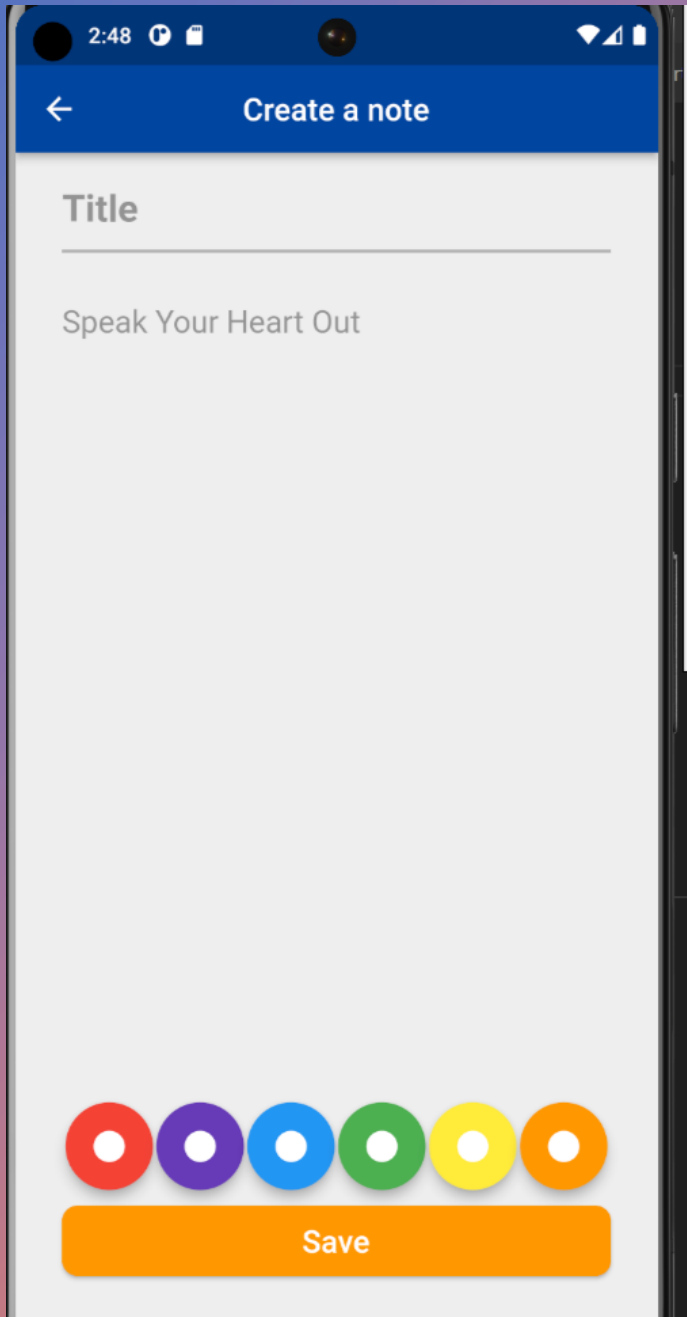

- *When we click on the add button, we will go to the new note screen where the user can write notes*
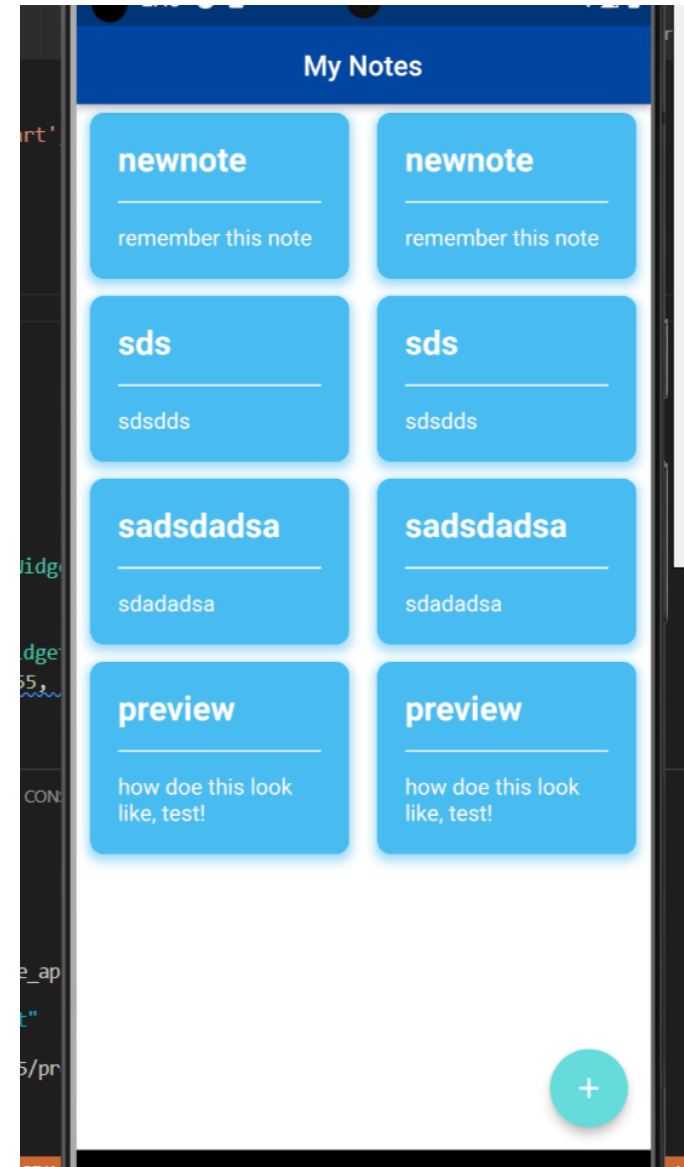

Features;

- *We have added the title and description feature,*
- *It allows the user to add the notes title and description*

Colors

• *One of the other distinctive functions that we added , is in this app it allows the user to pick up different background colors and apply the changes to their notes, Variety of colors like white , orange yellow , etc, is available for them to pick from*

Lastly,One important feature of a notepad app is the ability to view all the saved notes in one place. This feature provides users with a quick and easy way to access all of their notes, without having to search for them individually.

SUMMARY

- *This note app is a simple digital tool designed for users to write and store notes. It allows users to quickly and easily create and save notes for future reference. The app does not have any additional features like lists, or tags, and is solely focused on note-taking. Users can access their notes on the app anytime and anywhere, making it a handy tool for those who need to jot down ideas or information on-the-go.*

Thankyou!
